

Care to improve.

Medical devices are important. They improve clinical outcomes. Medical accessories connect those same medical devices to patients in order to measure bioelectrical signals. These signals are vital for correct diagnoses and treatments and better patient care.

At Technomed, we're experts in medical accessories. We provide branded products, private labeling, and OEM solutions. We put clinicians' accessory needs into their hands, from the very first idea to the finished product. Your finished product.

Most of all, we help you. Together we bring your ideas to life. This we do with hard work, dedication, passion and 40 years of experience. Our knowledge and skills help you achieve unlimited possibilities. For better patient care.

Get ready.

A good idea is the key to success. But how can you bring your idea to life? That's where we come in. We start by understanding your needs and how we may help. We determine your specific product requirements and market position. We look at what's needed to develop your product. Whether full-service packages, private labeling, or our own branded consumables, we tailor everything to your needs and make it ready for distribution in your market.

Our consumables provide quality, reliability, and safety to clinicians and patients. Whether you require bioelectrical stimulation, or recording a bioelectrical signal, our consumables are your starting point. We can help you with diagnosis and treatment in Clinical Neurophysiology (CNP) or support you in enhancing patient safety. You can achieve improved outcomes by applying IntraOperative Neurophysiological Monitoring (IONM) and in other medical areas in which bioelectric signals play a vital role.

A great idea for a new medical device calls for more, and we go all the way by offering a **FastTrack Product Development Program**. Our team of dedicated specialists start by understanding your idea. This can be a private-label product or something completely new. We manage risks and optimize your business. We develop your medical accessory and deliver your finished product ready for market release. We deliver your accessory needs from an idea right into the hands of your customer and support you every step of the way.

Make it happen.

When we know what you need, we will make it happen. We step away from the drawing board and start developing. This requires an A-to-Z process. From Research & Development to Regulatory Affairs and from Manufacturing to Logistics, we offer it all.

We're always improving and innovating our medical accessories. This is why we work in close collaboration with clinical experts, healthcare specialists, and industry leaders to develop our products – your products. Our knowledge and skills will help you match the performance of today's global market, so you'll always deliver a competitive product.

It's crucial Regulatory Affairs is integrated in every step of the process. Experience is key in reducing time to market. Our Regulatory Affairs specialists have the expertise to ensure that proper regulatory management is part of your project from start to finish.

When your product is developed, it needs to be manufactured and shipped. We combine in-house commercial and engineering expertise with regulatory capabilities and manufacturing. We provide complete turnkey solutions. To get things done, our network of specialized business partners can take care of marketing and distribution worldwide.

Raise your game.

We have been around for a while. For over 40 years, we have gained huge experience in successful medical accessory innovation, development, regulatory affairs, manufacturing, and commercialization. But that's not all. Together with Magstim Clinical, Magstim Research and Neurosign, we're part of Welcony Group Inc. This means you also benefit from the experience of all Welcony brands in delivering minimally invasive neurotechnology.

Technomed is a global company running business out of the Netherlands with subsidiaries in Asia and the USA for manufacturing and distribution. We combine proximity with cost-effective manufacturing. Our global network of healthcare experts, industry leaders, and business partners helps us to provide the ideal solutions for you and your customers. We know how to develop, manufacture, and distribute your product efficiently to keep you ahead of competition.

It doesn't stop here. We continuously develop new solutions, improve performance, and update quality to make sure you get the most out of working with us, both now and in the future.

Keep going, keep growing.

To grow your business, we need to work together in close collaboration. That's why we value long-lasting, open relationships in which we inspire each other and unlock your potential. You know your customers and their patients, we know how to reach them!

Your investments are safe with us. We only sell through our distributor network. This means you're in control: you manage your own growth.

We strive to make a difference for our customers and their patients around the world. We want to achieve better and affordable patient care. We work hard to expand our knowledge and competences every single day. We continuously invest in research and development, manufacturing facilities, and regulatory expertise.

It's our way of building and strengthening our partnership and continue growing.

With you.
